

CYBERGATE TECHNOLOGY SDN BHD

Cybersecurity Solutions

Protect Your Data, Network and People - Certified Fortinet Partner

KL - Selangor - Negeri Sembilan - Melaka

About This Service

Malaysian businesses are being targeted by cybercriminals at an accelerating rate. SMEs are increasingly the primary target because they typically have weaker defences. The average cost of a data breach for a Malaysian SME now exceeds RM 100,000 when downtime, recovery and reputational damage are included. Cybergate is a certified Fortinet partner implementing practical, affordable cybersecurity right-sized for Malaysian businesses.

Of Attacks Start With a Phishing Email

Fortinet

Certified Partner for Network Security

What Our Cybersecurity Solutions Cover

- v Fortinet FortiGate firewall supply and config
- v Next-gen firewall: IPS and app control
- v Endpoint protection and ransomware prevention
- v Email security: anti-phishing and anti-spam
- v Security awareness training for staff
- v PDPA compliance assessment and guidance
- v Multi-factor authentication (MFA) setup
- v VPN for secure remote staff access
- v Network segmentation and VLAN config
- v Vulnerability assessment and pen testing
- v Dark web credential monitoring
- v Security incident response

Why Malaysian SMEs Are Now the Primary Target

Large corporations have dedicated security teams and enterprise budgets. SMEs have neither - making them far easier targets. Cybercriminals know a 30-person Malaysian company is far less likely to have proper firewall rules, patched endpoints, MFA on email or staff trained to spot phishing attempts. Cybergate closes that gap with practical cybersecurity for businesses your size.

Our Cybersecurity Implementation Process

Pricing Guide

Firewall Setup From RM 2,200 FortiGate 40F supply and config. IPS, app control and VPN. Onsite installation included.	Endpoint Protection From RM 80/yr Per device per year. Antivirus, EDR and ransomware prevention. Managed deployment.	Managed Security From RM 300/mo Firewall monitoring and mgmt. Patch management, monthly security report, 20 devices.

Common Cyber Threats Targeting Malaysian Businesses

- Ransomware** - Encrypts all files. Average ransom demand: RM 20,000 to RM 200,000. Prevention: firewall, endpoint protection and staff training.
- Phishing** - 91% of attacks start here. Staff click fake links and enter credentials. Prevention: email filtering, MFA and awareness training.
- Business Email Compromise** - Fake emails impersonating management or suppliers to trick staff into fund transfers. Prevention: email authentication and training.
- Unpatched Systems** - Outdated Windows, software and firmware with known vulnerabilities. Prevention: patch management and vulnerability scanning.
