Malaysian Data Centre Hosting

CYBERGATE
TECHNOLOGY

Tier III Certified Facilities - Fast, Secure and Always On for
Malaysian Visitors

Your Website Is Hosted in World-Class Malaysian Data Centres

All websites we host run on servers in Tier III certified data centres in Malaysia. Your site loads fast for Malaysian visitors because the servers are physically close. Tier III certification means the facility has full redundancy - your website stays online even during hardware failures or scheduled maintenance.

CJ1 Data Centre

Cyberjaya, Selangor

Tier III Certified

AIMS Data Centre

Kuala Lumpur

Tier III Certified

Facility Infrastructure and Security

Infrastructure

- ✓ Raised flooring with HVAC temperature control
- ✓ Standby UPS and redundant power supply
- ✓ State-of-the-art Cisco power routers
- ✓ 1000Mbps and 40Gbps backbone connectivity
- ✓ 99.9% network uptime guarantee

Security and Compliance

- ✓ 24x7 monitoring and secure facility access
- ✓ Video camera surveillance throughout
- ✓ Smoke detection and fire suppression systems
- ✓ Tier III, ISO/IEC 27001 and PCI DSS certified
- ✓ World-class facility standards

Why Malaysian Hosting Matters for Your Business

Hosting your website on Malaysian servers means lower latency for local visitors, compliance with Malaysian data regulations and faster load times compared to overseas hosting. Our servers in Cyberjaya and Kuala Lumpur serve your site with the shortest possible path to customers across Klang Valley, Negeri Sembilan and Melaka. Your data stays in Malaysia.

Areas We Serve

Kuala Lumpur	Petaling Jaya	Shah Alam	Subang Jaya
Klang	Cheras	Puchong	Cyberjaya
Putrajaya	Seremban	Nilai	Melaka

Security, Process and Support

CYBERGATE
TECHNOLOGY

What Cybergate Delivers Before, During and After Your Website Launch

Security Hardening - Included as Standard

Every website we build undergoes full security hardening before handover. Most agencies charge extra for this. We include it in every build.

SSL Certificate + HTTPS Redirect	Encrypts all data, forces secure connections
HTTP Strict Transport Security (HSTS)	Prevents man-in-the-middle attacks
Security Headers	X-Frame-Options, CSP, X-Content-Type-Options, Referrer Policy, Permissions Policy
Directory Listing Disabled	Files and folders not publicly browsable
WordPress Hardening	Admin URL changed, plugin versions hidden, REST API secured
DNSSEC Configuration	DNS queries cryptographically verified - prevents DNS spoofing
CAA Record Setup	Only authorised CAs can issue SSL for your domain
Pre-Launch Security Scan	Vulnerabilities identified and resolved before going live

Our Development Process

01

Discovery and Scope

We learn about your business, audience and goals. We agree on page structure, design direction and content requirements before any work begins.

02

Design and Content

We design your homepage for approval, then develop all pages. Content formatted, images optimised, on-page SEO applied throughout.

03

Build and Test

Built on WordPress, hosting configured, SSL installed, forms tested, Analytics connected. Tested on desktop, tablet and mobile across major browsers.

04

Launch and Handover

Site goes live, submitted to Google Search Console. Your team trained on content updates. We manage hosting, domain and email ongoing.

Ready to build your website?
